

# MxTrack™

## for Mobile Management

Track Assets in the Office, at the Warehouse or in the Field

**Assign Location**

Asset Detail	
RFID Tag	00007170
Description	...HP Proliant LD385
Asset Tag	240712
Serial Number	USE634N07N
Part Number	UNKNOWN
Manufacturer	...t Packard Company

Location: ...776 F St. NW/06

New Location:

### Providing Comprehensive Inventory Functionality Anytime, Anywhere

- ◆ **Asset Tagging:** Records the necessary information to associate an RFID tag to an asset.
- ◆ **Asset Search:** Enables users to find individual assets or groups of asset quickly and easily by using signal strength to hone in on an asset's location.
- ◆ **Audit Asset Location:** Audits the assets associated with a location or group of locations, thus easing the data capture process. Asset location data is either verified or a discrepancy report is generated and the new information is reconciled within AssetTrack.
- ◆ **Asset Location Update:** Uploads all audited assets within a specific location into the AssetTrack application, ensuring that information is accurate and up-to-date.
- ◆ **File Transfer:** Bi-directional communication enables users to send files back and forth between the mobile device and the Fluensee AssetTrack server, or even between the AssetTrack server and an existing corporate system.

### Flexible Asset Tracking in the Palm of Your Hand

Fluensee MxTrack™ gives users the power of inventory tracking wherever they need it, without the cost of complexity of a fixed infrastructure. Whether users are using RFID, barcode or another tracking technology, MxTrack enables companies to perform quick physical inventories, asset audits, asset searches and more in the office, at the warehouse, in the field, or anywhere else assets exist to gain complete visibility and control of assets throughout the organization.

- |                      |                              |
|----------------------|------------------------------|
| • Oil & Gas          | • Brewing                    |
| • Stone & Glass      | • Automotive                 |
| • Energy & Mining    | • Aerospace                  |
| • Food & Beverage    | • Agriculture / Horticulture |
| • Event / Trade Show | • Trucking / Logistics       |
| • Corporate Retail   | • AND MORE                   |

**IT Assets / Electronics / High-Value Equipment** - Whether laptops, oscilloscopes or medical equipment, these types of assets are often difficult to locate when they need to be updated, calibrated or used in an emergency. While large, real-time tracking infrastructures might be right for some, a handheld solution still allows users to quickly do regular inventories, as well as perform specific assets searches.

**Field Asset Management** - Utility-related companies need to track location and service information on fixed assets; construction companies want to inventory tools and equipment; and other businesses that may operate off-site simply need more visibility and control of their assets. MxTrack not only provides relevant inventory functionality, but can even utilize GPS to assign outdoor coordinates.

**Warehouse and Distribution Centers** - Areas with a large number of goods often-times have trouble knowing what they have and where it is. MxTrack's capabilities will allow them to quickly and easily do inventories, as well as location specific items within the storage area. Inventory can also be easily reconciled so that accurate, up-to-date information can also be available.

**Shipping & Receiving** - Giving dock workers the flexibility to scan shipments out to a specific location not only expedites the shipping process, but also eliminates manual counts and can automatically compare a shipment to an order, thus reducing shipping errors. Similarly, receiving returnable assets is also streamlined so that returns can be automatically counted and credited to the end user / supplier.

## Fast

- Automatically scans auto-ID tags
- Makes immediate location updates and changes
- Provides employees with real-time inventory and updates
- Easy setup and installation

## Flexible

- Allows specific search criteria to be input in order to find lost assets
- Conducts partial or full inventories
- Works with a variety of portals for uses such as verification checks, one-off auditing, complete auditing and security
- Can transfer information to the server in real time via Wifi or cellular communication or in batch mode when a connection is not available

## Efficient

- Eliminates the need for manually-driven processes
- Reads barcodes and RFID (passive and active) tags
- RFID provides non-line-of-sight and multiple asset scanning
- Minimized human error
